

AIM :

To design and develop a shell script–based application that generates a student marksheet and performs various system and file handling operations using menu-driven scripts.

OUTPUT :

The screenshot shows a web browser window with the title "Student Marksheet Generator". The address bar shows "127.0.0.1:5500/OSwebsite.html". The page has a purple background. In the center, there is a white card with the header "S B Jain Institute, Nagpur Official Student Marksheet" and "Student Marksheet Generator". Below the header, it says "Enter student details, generate marksheet, and print instantly." The form contains the following fields: "Student Name" (Priti Waghmare), "Profile Photo (optional)" (Choose File | No file chosen), "Roll Number" (CM24104), "Class" (2nd year), "Number of Subjects" (3), and three subject rows: "FAI" (88), "OS" (80), and "MATHEMATICS" (90). At the bottom of the form are three buttons: "Generate Result", "Reset", and "Print Marksheet".

The screenshot shows the same web browser window, but now the "Generate Result" button has been clicked. The form fields remain the same. Below the form, a new section titled "Priti Waghmare - 2nd year" with Roll Number "CM24104" is displayed. It contains a table with the following data:

Subject	Marks	Status
FAI	88	Pass
OS	80	Pass
MATHEMATICS	90	Pass

Below the table, there is a progress bar showing 86.00% completion. The total marks are 258 / 300. The grade is "Distinction" and the remark is "Excellent Performance". At the bottom, it says "Congratulations! You Passed".
